

Press information – raumplus presents new sliding door system

## A PROFILE LIKE A CUT GEMSTONE

**With »Facet«, the name is the concept. The Berlin furniture designer Michael Hilgers was inspired by the cut facets of a precious stone for his design. The slender profiles reflect ambient light with varying intensity and add the perfect design touch to interiors as room dividers, cupboard doors or entrances to walk-in wardrobes.**

This idea, which is »brilliant« in many respects, derives its special effect from the interplay of deliberately reduced profile dimensions with mitre-like corner joints. In this way, the door panels of the »Facet« sliding door system are framed both puristically and elegantly. Their sculptural, filigree profile frame sets the exclusive scene for the panel materials, as well as the storage space behind the glass.

The design of »Facet« is exemplary of the pragmatic design® methodology developed by the Berlin designer, which focuses on individual spatial reference, minimalist design and practical functionality.

The possible applications of »Facet« include its use as a sliding door in front of built-in wardrobes, as a room divider or generous access to a walk-in wardrobe. The dimensions that can be realised range from a minimum of 500 x 700 mm to a maximum of 1800 x 3500 mm. Depending on the room situation and floor covering, there is a choice between a door guide by floor rail or as a barrier-free Air version. The Air version has a load-bearing capacity of up to 60 kg per door.

The exclusive look of the sliding door profiles is further intensified by their contemporary living room colours: Copper, Champagne or Black, all three in anodised brushed finish, allow the faceting of the profiles to shimmer in different nuances.

Additional design options are offered by the use of a maximum of two horizontal panel dividing rails, which can be used to combine up to three different panel colours or materials, such as wood, glass or mirror, in one door. A handle that is flush with the profile harmoniously adapts to its shape without protruding into the field of vision.

With »Facet«, raumplus has once again set a milestone in product design, as the »Facet« profile system has been recognised by the international Red Dot Award jury for its exceptional quality. With the Red Dot Award, the jury honours products with special design quality and a high degree of innovation.
