

Press release - raumplus launches new wardrobe lighting with innovative LED system

## WARDROBE LIGHTING REDEFINED

The new raumplus lighting system, which has been available since 1 February 2025, sets new standards in terms of wardrobe lighting and combines technical innovation with aesthetic perfection. With the introduction of this pioneering lighting solution, raumplus is once again underlining its position as an innovation leader in the field of customised furnishing solutions.

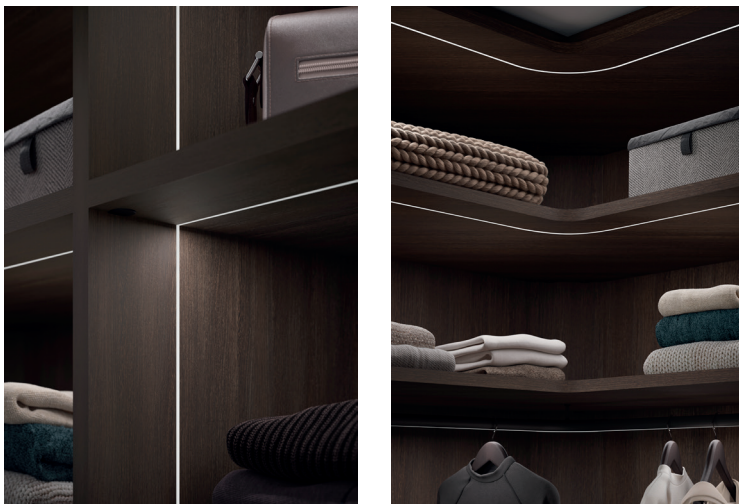

Light is perceived individually by each of us, creates different emotions, can control our behaviour and creates atmosphere. „Light determines how a room or piece of furniture affects us. We are therefore delighted that we have been able to make wonderful changes to our existing lighting system thanks to our new, improved technology,” says Ulrike Wessel, Head of Product Development & Management at raumplus.

### **Innovative technology meets maximum flexibility & ease of installation**

The exclusive LED lighting system impresses with its unique technology, which works completely without visible light points. The new lighting, based on a filigree 4mm light strip, can also be customised to the millimetre to match the made-to-measure wardrobes. With an impressive colour temperature range of 2700 to 5000 Kelvin, the system offers maximum flexibility in lighting design - from daylight white to warm white light.

A uniform arrangement of the lights and the even illumination towards the front edge create a homogeneous impression and directs the focus onto the selection of clothing and accessories. The same applies to the new, filigree, integrated lighting of the clothes rails, which is now also evenly illuminated across the corner situation and includes the same luminaire. The light on the shelves is individually connected to the live contact rail by means of a pin contact pick-up and thus illuminated. This has the advantage that the customer can make simple changes to the layout in the grid and retrofit shelves just as easily at a later date. Thanks to the new current-carrying contact rail, there is no need for cabling inside the cabinet and the technical components are mounted out of sight.

The system therefore impresses with its ease of installation and versatile lighting options. The following are available:

- Side lighting with illuminated shelves
- Specially developed illuminated corner shelves
- LED-integrated clothes rails
- Aluminium frame glass shelves with LED technology

### **Smart home integration & intelligent control options**

In line with its conviction to continuously develop its products, raumplus uses state-of-the-art technology for the new lighting system. The wide range of control options, from contact switches and motion detectors to smart home integration via Google Home and Alexa, for example, make the system a future-proof investment for a personalised living experience. The intelligent networking enables intuitive operation and can be seamlessly integrated into existing smart home systems.

All the facts about the new lighting can be found on the landing page for wardrobe lighting: [www.raumplus.com/wardrobelighting](http://www.raumplus.com/wardrobelighting)

**Please do not forget to name raumplus as the manufacturer:**
